

STOP OVERPAYING FOR ALUMINUM.

Custom plates, square beams, standoffs and brackets on an **8 mm grid** — machined by FTC students, priced well under **SendCutSend** and **goBILDA**, and in your hands in **1-3 days**.

Way cheaper

We heavily undercut the big suppliers on the same parts.

1-3 days, local

San Diego delivery or shop pickup. No shipping wait.

No minimums

One bracket or fifty standoffs — both are fine.

WHAT WE MAKE

Pocketed plates

Custom outlines, weight-saving pockets, clearance or tapped holes.

Square beams

Threaded or unthreaded, cut to length, deburred and ready to bolt.

Standoffs

goBILDA-style aluminum standoffs for a fraction of the price.

Built by students from Runtime Terror (FTC #22105) and All Systems Go (FTC #21239) — two of the strongest programs in San Diego and Kentucky. We've waited on the same overpriced parts you have. Send a DXF, a STEP file, or a dimensioned sketch and we'll quote it same day.
