

# STOP OVERPAYING FOR ALUMINUM.

1/8 in. plates, fully threaded **8 mm grid** square beams and custom 3D printed parts — made by FTC students, priced well under **SendCutSend** and **goBILDA**, and in your hands in **1-3 days**.

## Way cheaper

We heavily undercut the big suppliers on the same parts.

## 1-3 days, local

San Diego delivery or shop pickup. No shipping wait.

## No minimums

One bracket or a full set of plates — both are fine.

### WHAT WE MAKE

#### 1/8 in. plates

**6061 aluminum or polycarbonate.** Custom outlines, pockets, tapped holes.

#### Square beams

**Fully threaded, 8 mm grid.** Cut to size, deburred, ready to bolt.

#### 3D printed parts

**Custom, printed to order.** Guides, spacers, mounts and housings.

**Built by students from Runtime Terror (FTC #22105) and All Systems Go (FTC #21239)** — two of the strongest programs in San Diego and Kentucky. We've waited on the same overpriced parts you have. Send a DXF, a STEP file, or a dimensioned sketch and we'll quote it same day.
